detail design, (reinforcement
drawings, shop drawings).

Architecture

Sadar + Vuga d.o.o.

Investor

Chamber of Commerce and
Industry of Slovenia

The new office building of Slovenian chamber of Commerce in Ljubljana is an eight-storey building with two basement storeys for parking. It has two different construction systems – one is reinforced concrete part (eight storeys) and the other is very demanding steel structure (five storeys). The building has approximately 17.500 m². Our task was to make the construction analysis and reinforcement and shop drawings. We also surveyed the construction works.
